WHERE: [Click here](#) for more information and to register.

This webinar is part of a two-part series about COVID-19 and the Delta variant. The second event will take place on August 18th, with more information to follow.

COVID-19 VACCINE CONFIDENCE SURVEY

LIVE WELL
SAN DIEGO

SURVEY DETAILS

June 13 – June 24, 2021

4,297 Survey Respondents

Oversampled in low vaccination areas

OVERVIEW

About 40% of unvaccinated respondents were "very" or "somewhat" likely to get the vaccine; 54% were "very" or "somewhat" unlikely to get the vaccine. The survey results identified three focus areas for people who were not fully vaccinated:

1. Those who still need a second dose of a COVID-19 vaccine and are highly likely to do so with follow-up

2. Those who still lack full confidence in the vaccine and are likely to get vaccinated after consultation with a trusted messenger, typically a nurse or doctor.

3. Those who do not currently plan to get vaccinated, more from an ideologic perspective rather than a matter of information or access.

OPPORTUNITIES FOR ACTION

- Working with physicians' offices, clinics, and other healthcare providers to identify those needing their second dose and providing timely and accurate information.
- Reaching communities with lower vaccination rates and providing appropriate, accurate messaging, as well as immediate access to vaccines.
- Providing the opportunity for the most resistant residents to understand the changing nature of the pandemic offering viable rationale to change their minds (e.g., the growing issue with variants).

Trusted Messengers

Doctors and nurses (68%) were the most trusted messengers followed by friends and family (61%).

Information Sources

Local (50%) and cable news (49%) are the most frequent sources of public health information, followed by news apps (47%) and social media (47%) such as Instagram, Twitter, and Nextdoor.

Vaccination Locations

The doctor's office (50%) is the preferred place to get the vaccine, followed by a pharmacy (28%).

DIGITAL COVID-19 VACCINATION RECORDS

LIVE WELL
SAN DIEGO

California
DEPARTMENT OF TECHNOLOGY

- The Digital COVID-19 Vaccine Record allows California residents to manage their personal vaccination record and share at their discretion
- Visit <https://myvaccinerecord.cdph.ca.gov/>
- If you have problems using the Digital COVID-19 Vaccine Record portal, or if your record is inaccurate, the following resources are available:
 - [CDPH troubleshooting website](#)
 - San Diego Regional Immunization Registry:
Available 7 days/week at (619) 692-5656

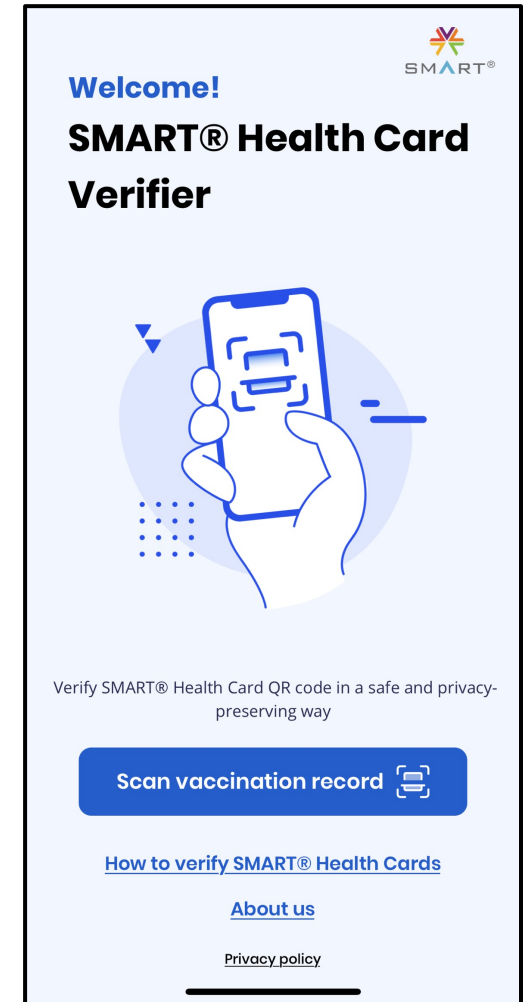

SCANNING VACCINE QR CODES

QUESTION: How can we scan QR codes from the CDPH Digital COVID-19 Vaccine Record?

ANSWER: The vaccine QR codes can be scanned using a mobile device with the [SMART Health Card Verifier App](#) installed.

- The app allows you to scan vaccine QR codes, ensure they are valid, and confirm vaccination status
- *Note:* If the font on an Apple device is too large, you won't be able to scan a QR code in the app. If you experience this issue, change your mobile device settings to have a smaller font size.

EARLY THERAPY FOR COVID-19 AVAILABLE AT NO COST

LIVE WELL
SAN DIEGO

MONOCLONAL ANTIBODY THERAPY IS AVAILABLE!

- Monoclonal antibodies are proteins that fight infection.
- One injection can help people from getting sicker and/or hospitalized from COVID-19.
- Ideally, the potentially lifesaving treatment is received **as soon as possible** after COVID-19 symptoms begin, EVEN IF you are already vaccinated.
- Monoclonal antibody treatment is available at no cost to all [medically eligible](#) individuals, regardless of health insurance or immigration status.

WHO CAN BENEFIT FROM MONOCLONAL ANTIBODIES?

- People who have a positive test for COVID-19 and have mild to moderate symptoms, **AND**
- Have had COVID-19 symptoms for less than 10 days, **AND**
- Are at least 12 years old, **AND**
- Are at [high-risk](#) of getting very sick from COVID-19
 - Examples include: 65 years of age or older, obese, pregnant, diabetes, heart disease, and high blood pressure
